**CONTAMINATED STEEL PIPE**  
AFTER 14 YEARS OF SERVICE

## Clean ductile iron pipe is a sight for sore eyes (and pocketbooks).

DI piping systems are by far the most environmentally sustainable piping solution, providing **LONGEVITY**: The corrosion rate of steel is  $\pm 3.5$  times greater than the corrosion rate of DI. **WATER QUALITY**: Water flowing through DI pipe is discharged into the environment at the same quality as water entering the pipe. **SUPERIOR HYDRAULICS**: The Friction Coefficient of DI pipe is unchanged after 11 years. DI pipe offers several options: INCREASED FLOWS, HIGHER RESIDUAL PRESSURES, SMALLER PIPE DIAMETERS or LOWER HP. **INCREASED OPERATING EFFICIENCY**: with higher Water Quality and Residual Pressure.
